

Task 2: Create a GPO: Account Lockout Solution:

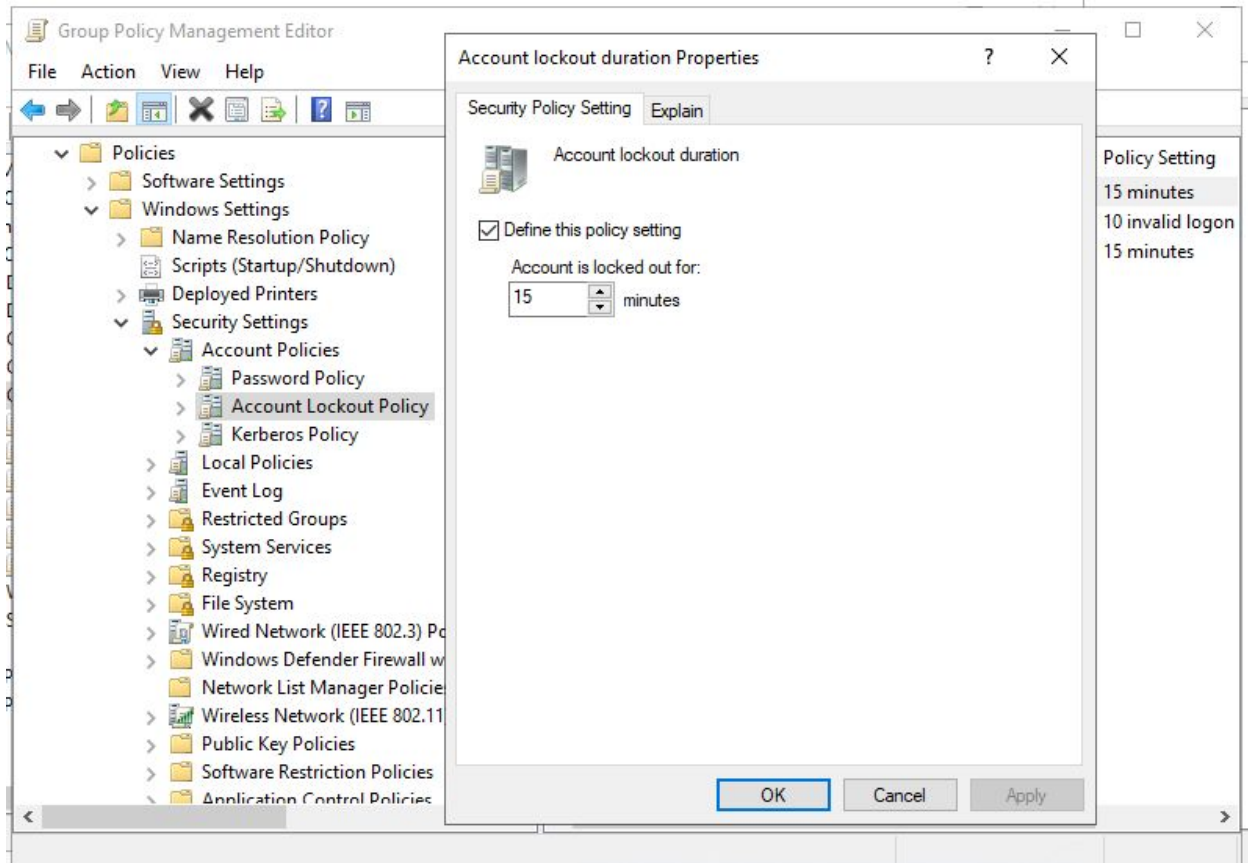

Name the Group Policy Object **Account Lockout**.

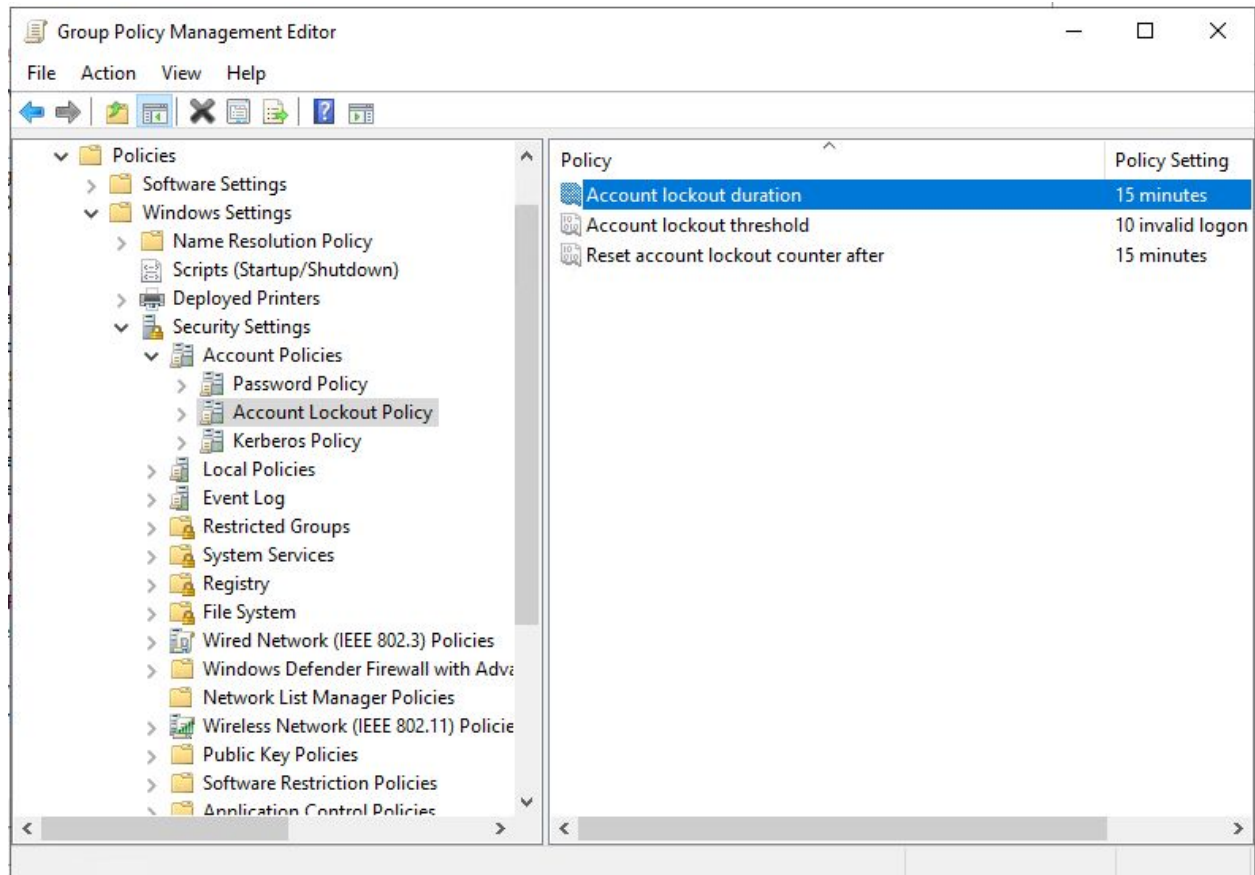

Editing policies for this new GPO, look for *computer configuration* policies to apply to your GC Computers OU that involve *Windows security settings* and *accounts*. I recommended using Microsoft's 10/15/15, which means the account should lock out after 10 - invalid logon attempts, account should lock out for 15 minutes, and account should reset after 15 minutes.

Exit the Group Policy Management Editor.

Link the GPO to your GC Computers organizational unit.
